

Homework

Homework

- On the contact page of your mini website, make sure you have a contact form already in place. If you don't already have a form, design one.
- In this homework, you will create a user interface element on the form that works like this:
 - When user select option 1 from a select (dropdown) menu for example, an input box pertaining to option 1 will be visible/revealed below it.
 - When user select option 2 from the menu, an input box pertaining to option 2 will be visible/revealed below it.
 - And so on (if you have more than 2 options).
 - Only 1 input box is visible at any given time, except at the start when the page loads, no input box is visible/revealed, until the user selects an option.
 - The next slide will show some examples.

Reminder:

Make at least 2 commits and push to your remote Github repository during and also at end of coding.

Homework

What you will need:

- Select menu with options (HTML):
 - The first option serves more as an instruction
 - Create id on the open select tag as well as all open option tags
- Variables
- DOM methods:
 - getElementById() or querySelector()
- DOM event:
 - addEventListener() or attribute event
- DOM style and properties
- Scripts on an external javascript file

Note: see one of the demo exercise from day 2 this week as example/guide

Homework

- **Due:**

- On or Before Next Class

- **Submit:**

- Post Github URL Link on GAP Week 4 Day 3 Homework
